Since programming in DOS with assembly language was one of the best option for many applications, there were dedicated assemblers like Borland Turbo Assembler (TASM) or Microsoft Macro Assembler (MASM) or less popular ones like A86 for example. TASM and MASM were also parts of bigger development suits contrary to A86.Assembly Language. This is done by running DEBUG program at the DOS prompt, where program is the name of your program. DEBUG will work with .com and .exe executables. You must include the file extension in the filename when you call it using DEBUG. DEBUG does not work with .bat files.
